

Carbon Management

Support for Airports for Carbon Management

CLIENT Airport Carbon Management Group
LOCATION Airports throughout the UK
DATE Since 2002
PROJECT Support for Airports for Carbon Management

DESCRIPTION

The Airport Carbon Management Group consists of representatives of the operators of the various UK Airports, this includes companies like BAA who are responsible for the running of 7 of the major airports in the UK.

The purpose of this group is to combine forces to reduce the carbon emissions at airports. There are a great variety of sources for carbon emission that are not directly related to the aircrafts.

This group is partly funded by the Carbon Trust, who initiated Abricon's involvement with the group.

Abricon's services for the group include,

- Communications between the Group and the Carbon trust
- Organising and Facilitating meetings
- Collection and Evaluation of available data to identify possible areas of carbon reduction
- Advice on services available from the Carbon Trust and other sources
- Training
